SMART UA

From evidence to action

How SMART UA works to strengthen pathways to housing and employment for Ukrainian refugees.

1 RESEARCH & MAPPING

Listening to Ukrainian refugees and mapping labour and housing ecosystems to identify barriers, needs and promising practices.

2 MULTI-STAKEHOLDER COOPERATION

Bringing together civil society, reaserchers, public authorities employers and service providers to develop shared responses.

3 TURN EVIDENCE INTO TARGETED SUPPORT

The six housing and labour market reports provided evidence on barriers, gaps and promising practices. Combined with individual assessments, these findings informed targeted housing support and employment activities, including language, IT, digital, soft-skills and self-employment training.

4 SHARE & SCALE

SMART UA shares research, practical tools and project experience through reports, videos, transnational exchanges, advocacy and the final European event, supporting the replication and scaling of promising approaches beyond the project.
